MAGNATTACK™ GLOBAL SUPPLIES SEVEN SELF CLEANING GRATE MAGNETS TO CEREAL MANUFACTURER

MAGNATTACK™ GLOBAL has recently completed a major project for a large Sydney based cereal manufacturer, involving 7 Large MAGNATTACK™ self cleaning grate magnet systems.

The high intensity, pneumatic fully automatic self cleaning grate magnet system was chosen for removal of fine, weakly magnetic fragments and for its ability to clean without the need of reliance on operators. This in turn makes for greater food safety because the grate magnet bars do not need to be contacted or touched for cleaning.

Self cleaning magnets are becoming the preferred option in magnetic protection in the food industry as they reduce risks of metal contamination caused by operator failure to clean and reduce man hour costs of the previously time consuming task of cleaning magnets.

MAGNATTACK™ GLOBAL has recently supplied the new development in self cleaning magnets to a major grain port in South Australia with over 500 TPH of through put capability. Other recent installations of the new self cleaning magnet system include a major brewery in Tasmania, rice manufacturing facilities in the Riverina area. MAGNATTACK™ GLOBAL has also recently supplied the self cleaning grate system to a major oats manufacturer in Western Australia.

Self cleaning housings will generally fit in place of existing manually cleaned grate magnets.

The self cleaning grate magnet system is also available as a self cleaning single or twin bar magnet.

With over 40 years experience in food industry Magnetics, MAGNATTACK™ GLOBAL can provide proven solutions for Magnetic separation equipment to suit individual application requirements.
