LIQUID PIPELINE MAGNETS AVAILABLE FROM MAGNATTACK™ GLOBAL

MAGNATTACK™ GLOBAL specializes in magnetic separation solutions for metal fragment control in the food industry.

One of MAGNATTACK™ GLOBAL's breakthroughs in development of efficient magnetic separation for liquid lines is MAGNATTACK RE80 pressure pipeline liquid magnets, designed to efficiently extract magnetic fragments in both viscous and non viscous liquid food products.

MAGNATTACK™ RE80 Pressure pipeline liquid magnets can be made to suit pipelines from 1" through to 8" and the RE80 magnetic elements inside the pressure pipeline liquid magnets are of a high temperature Grade, for product or cip temperatures up to 150°C.

MAGNATTACK™ GLOBAL estimates approximately 65 installations of Magnattack™ Pressure pipeline liquid line magnetic separation solutions have been completed across Australia and New Zealand.

The MAGNATTACK™ liquid line 10,000 gauss magnet system is designed so cleaning of magnets is very simple and easy. In years gone past, operators have had to contend with multiple bars on pot style magnets, which are extremely difficult to clean.

The MAGNATTACK™ RE80 pressure pipeline liquid magnet is designed to efficiently extract magnetic fragments, work hardened stainless steel and stone particulates. This high grade Endorsed equipment can be used for product protection against metal fragment issues and product complaints and can also be used to protect expensive equipment such as extruders, pumps and homogenisers against damaged caused by entry of metal fragments. The MAGNATTACK™ pressure pipeline liquid magnet is aimed at providing efficient magnetic separation without leaks, blockage or distortion. The magnetic liquid line separator has proved effective in removal of metal from Chocolate, syrups, soups, sauces, pie fillings,

viscous pet foods and a large range of dairy products. The units can be Jacketed to allow for hot viscous products where required (e.g. chocolate transfer). The liquid pipeline magnet can be installed in either pressure or suction lines and is supplied with wetted parts of 316 (or special alloys for highly corrosive products).

With over 40 years of experience in metal fragment control in the food industry, MAGNATTACK™ GLOBAL can assist in implementation of magnetic separation solutions WORLDWIDE that are well proven and very effective.
