MAGNATTACK™ GLOBAL DEVELOPS SELF CLEANING GRATE MAGNET FOR FOOD INDUSTRY APPLICATIONS

MAGNATTACK™ GLOBAL has recently developed a high intensity self cleaning Grate magnet system designed for use in dry applications on the food industry in both intake and Packing locations.

The all Australian built MAGNATTACK™ RE80 self cleaning magnet has been in production for nearly a year after successful testing in harsh grain environments

Self cleaning magnets are becoming the preferred option in magnetics in the food industry as they reduce risks of metal contamination caused by operator failure to clean and reduce man hour costs of the previously time consuming task of cleaning magnets.

MAGNATTACK™ GLOBAL has recently supplied the new development in self cleaning magnets to a major grain port in South Australia with over 500 TPH of through put capability. Other recent installations of the new self cleaning magnet system include a major brewery in Tasmania and rice manufacturing facilities in the Riverina area.

Self cleaning housings will generally fit in place of existing manually cleaned grate magnets.

The self cleaning grate magnet system is also available as a self cleaning single or twin bar magnet.

With over 40 years experience in food industry Magnetics, MAGNATTACK™ GLOBAL can assist in design of Magnetic separation equipment to suit customer's requirements
